

# Parker

# Heavy Duty

# Hydraulic Cylinders

---

## Series 2H

Exclusive with the Parker Stepped Cushion for increased performance and productivity

- Faster cycle time
- Reduced hydraulic shock
- Reduced machine noise
- Lower machine maintenance

- Heavy Duty Service – Industrial Tie-Rod Construction
- Nominal Pressure – 3000 PSI
- Standard Bore Sizes – 1-1/2" through 6"
- Piston Rod Diameters – 5/8" through 4"
- 18 Standard Mounting Styles

---

For Cylinder Division Plant Locations – See Page II.

# The heavy-duty hydraulic cylinder with features only Parker can promise – and deliver!

Series 2H cylinders keep on performing like you expect from Parker — producing more power per pound, more power per dollar — over millions of trouble-free cycles. Everything you need for reliable 3,000 psi performance. Patented "Jewel" rod gland for longer life and lower operating costs. Chrome-plated, case hardened piston rods. Rod end studs of high yield-strength steel, with rolled threads for added strength. Tie rods with rolled threads and steel nuts. Floating cushions with float-check action and positive metal-to-metal seal. And every Parker cylinder is *individually* tested before it leaves our plant.

---

For additional information – call your local Parker Cylinder Distributor.

# Series 2H

## Heavy Duty Hydraulic Cylinders

Specifications/  
Mountings

### Standard Specifications

- Heavy Duty Service – NFPA specifications and ANSI B93.15-1981 mounting dimension standards
- Standard Construction – Square Head – Tie Rod Design
- Nominal Pressure – 3000 P.S.I.\*
- Standard Fluid – Hydraulic Oil
- Standard Temperature – -10 deg F to +165 deg F\*\*
- Bore Sizes – 1½" through 6" (Larger sizes available)

*In line with our policy of continuing product improvement, specifications in this catalog are subject to change.*

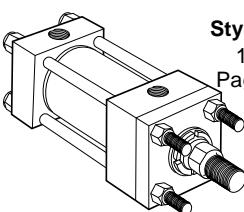

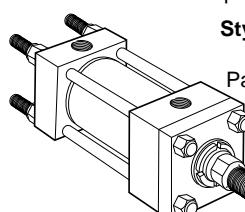

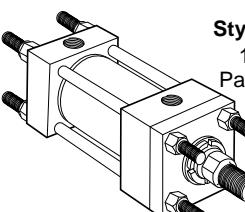

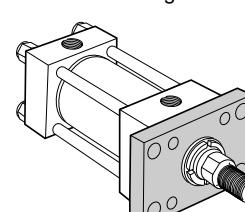

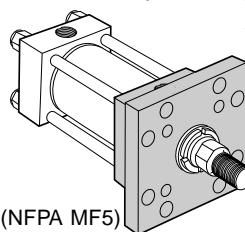

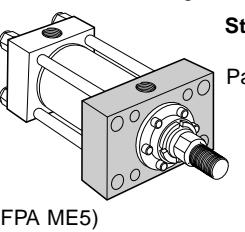

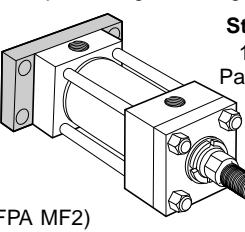

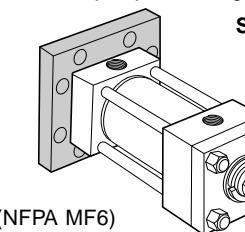

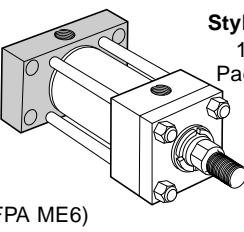

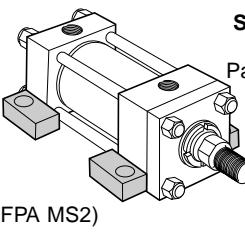

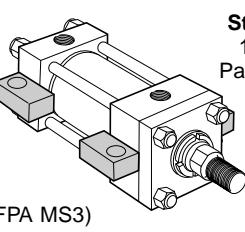

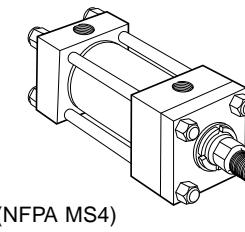

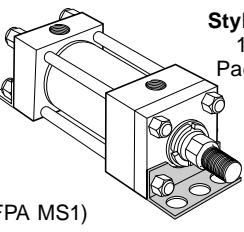

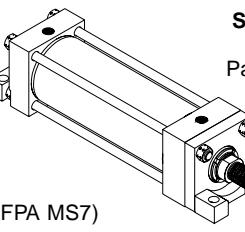

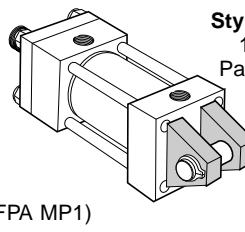

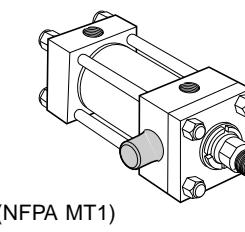

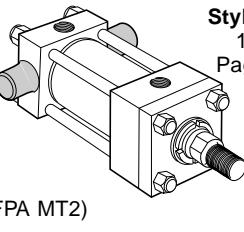

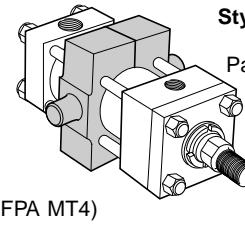

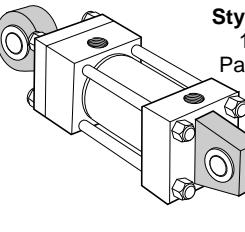

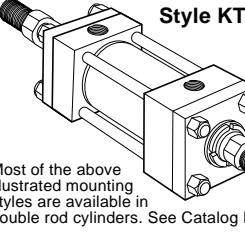

Note: Series 2H Hydraulic Cylinders fully meet N.F.P.A. Standards and ANSI Standard B93.15-1981 for Mounting Dimensions for Square Head Industrial Fluid Power Cylinders.

- Piston Rod Diameter – 5/8" through 4"
- Mounting Styles – 18 standard styles at various application ratings
- Strokes – Available in any practical stroke length
- Cushions – Optional at either end or both ends of stroke. "Float Check" at cap end.
- Rod Ends – Three Standard Choices – Specials to Order

\*If hydraulic operating pressure exceeds 3000 P.S.I., send application data for engineering evaluation and recommendation. See section C, page 84 for actual design factors.

\*\* See section C, page 83 for higher temperature service.

# The inside story on why series 2H is your best choice in heavy duty hydraulic cylinders

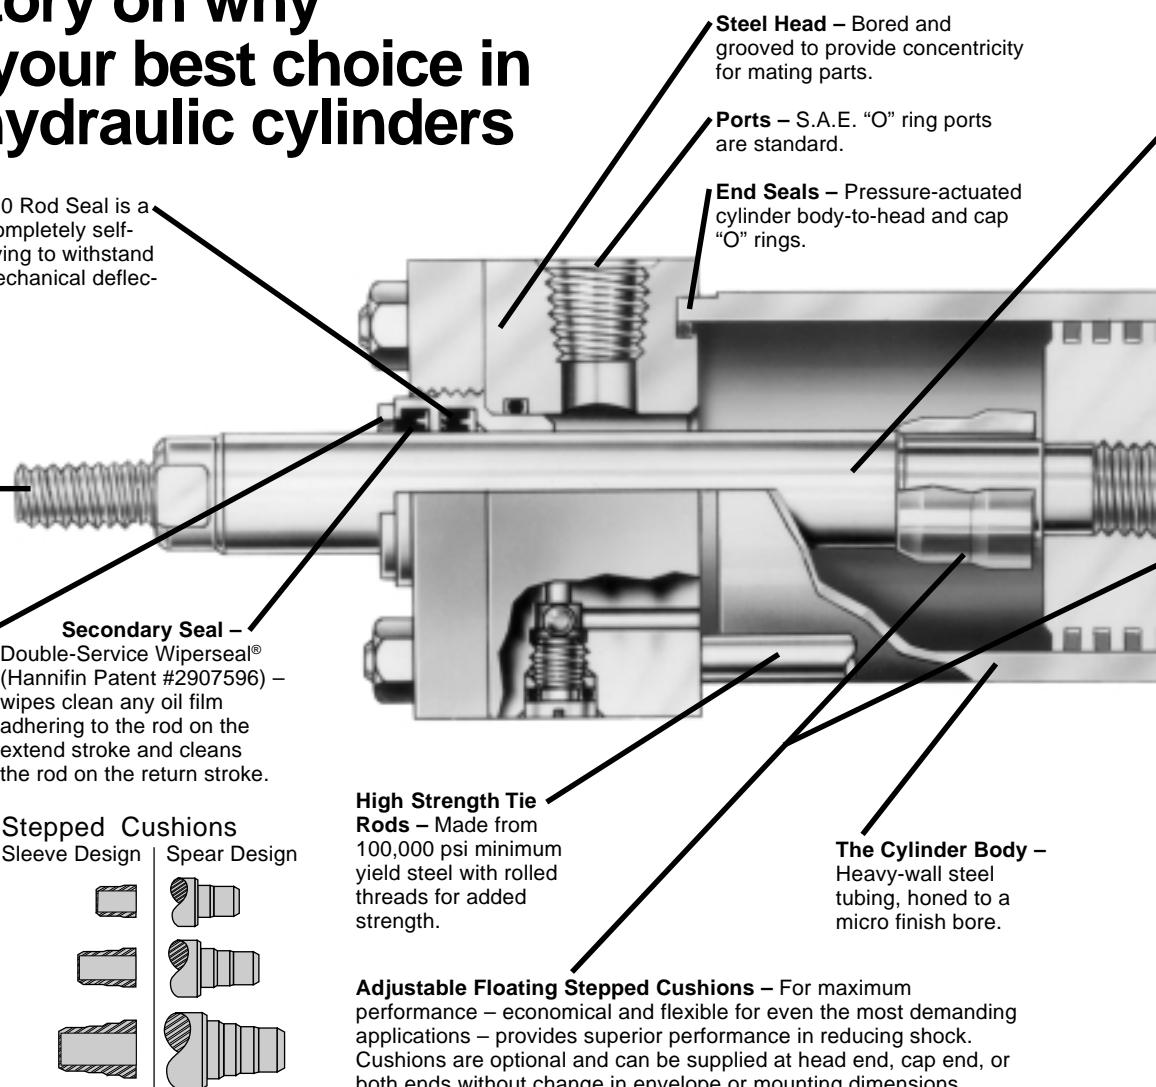

**Primary Seal** – New TS-2000 Rod Seal is a proven leakproof design – completely self-compensating and self-relieving to withstand variations and conform to mechanical deflection that may occur.

## Piston Rod Stud –

Furnished on 2" diameter rods and smaller when standard style #4 rod end threads are required or on 1 $\frac{3}{8}$ " diameter rods and smaller when style #8 threads are required. Also available in 2 times the catalog "A" dimension length. Studs have rolled threads and are made from high strength steel. Anaerobic adhesive is used to permanently lock the stud to the piston rod.

## "Jewel" Rod Gland Assembly –

Externally removable without cylinder disassembly. Long bearing surface is inboard of the seals, assuring positive lubrication from within the cylinder. An "O" ring is used as a seal between gland and head, and also serves as a prevailing torque-type lock.

## Parker's New, Exclusive Stepped floating cushions combine the best features of known cushion technology.

Deceleration devices or built-in "cushions" are optional and can be supplied at head end, cap end, or both ends without change in envelope or mounting dimensions. Parker cylinder cushions are a stepped design and combine the best features of known cushion technology.

Standard straight or tapered cushions have been used in industrial cylinders over a very broad range of applications. Parker research has found that both designs have their limitations.

As a result, Parker has taken a new approach in cushioning of industrial hydraulic cylinders and for specific load and velocity conditions have been able to obtain deceleration curves that come very close to the ideal. The success lies in a stepped sleeve or spear concept where the steps are calculated to approximate theoretical orifice areas curves.

In the cushion performance chart, pressure traces show the results of typical orifice flow conditions. Tests of a three-step sleeve or spear show three pressure pulses coinciding with the steps. The deceleration cushion plunger curves shape comes very close to being theoretical, with the exception of the last 1/2 inch of

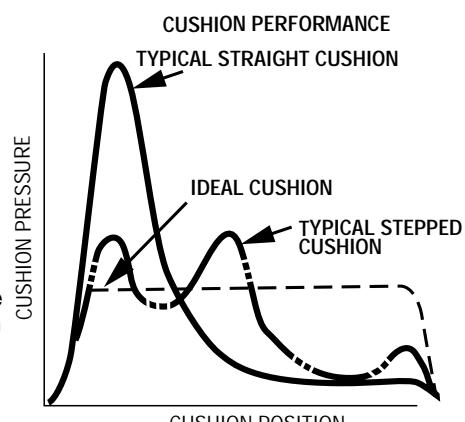

travel. This is a constant shape in order to have some flexibility in application. The stepped cushion design shows reduced pressure peaks for most load and speed conditions, with comparable reduction of objectionable stopping forces being transmitted to the load and the support structure.

All Parker Hannifin cushions are adjustable.

The Series 2H cylinder design incorporates the longest cushion sleeve and cushion spear that can be provided in the standard envelope without decreasing the rod bearing and piston bearing strengths.

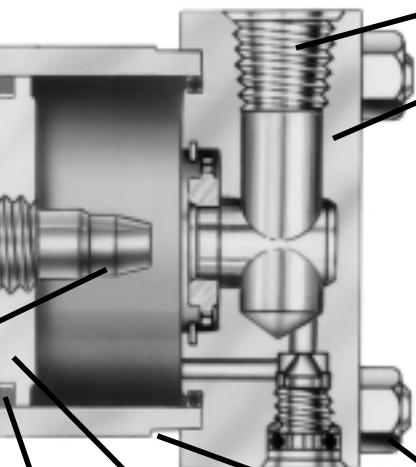

(1) When a cushion is specified at the head end:

- A self-centering stepped sleeve is furnished on the piston rod assembly.
- A needle valve is provided that is flush with the side of the

For additional information – call your local Parker Cylinder Distributor.

**Piston Rod** – Medium carbon steel, induction case-hardened to 54 R<sub>c</sub>, hard chrome-plated and polished to 10 RMS finish. Piston rods are made from 90,000 to 100,000 psi minimum yield material in  $\frac{5}{8}$ " through 4" diameters. Larger diameters vary between 57,000 and 90,000 psi minimum material, depending on rod diameter. The piston thread equals the catalog style #4 rod end thread for each rod diameter to assure proper piston-to-rod thread strength. Two wrench flats are provided for rod end attachment.

**Ports** – S.A.E. "O" ring ports are standard.

**Steel Cap** – Bored and grooved to provide concentricity for mating parts.

#### Optional Ports

**Ports** – N.P.T.F. ports are optional at no extra charge. Oversize N.P.T.F. and S.A.E. ports are available at extra charge.

**Seals** – Buna-N (Nitrile) seals are standard.

**Viton Seals** – Optional at extra charge.

#### Alloy Steel Tie Rod Nuts

**Align-A-Groove** – (Patent #3043639) – A  $\frac{3}{16}$ " wide surface machined at each end of the cylinder body. Makes precise mounting quick and easy.

**One-Piece Fine Grained Cast Iron Piston** – The wide piston surface contacting cylinder bore reduces bearing loads, and a long thread engagement with rod provides greater shock absorption. Anaerobic adhesive is used to permanently lock and seal the piston to the rod.

**Step Cut Iron Piston Rings** are standard.

head even when wide open. It may be identified by the fact that it is socket-keyed. It is located on side number 2, in all mounting styles except D, DB, DD, JJ, HH and E. In these styles it is located on side number 3.

- c. On 5" bore and larger cylinders (except for 2 $\frac{1}{2}$ " bore with code 2 rod), a springless check valve is provided that is also flush with the side of the head and is mounted adjacent to the needle valve except on mounting style C, where it is mounted opposite the needle valve. It may be identified by the fact that it is slotted.
- d. On 1 $\frac{1}{2}$ " - 4" bore cylinders a slotted sleeve design is used in place of the check valve.
- e. 1 $\frac{1}{2}$ " - 2" bore cylinders use a cartridge style needle valve (see Figure A).

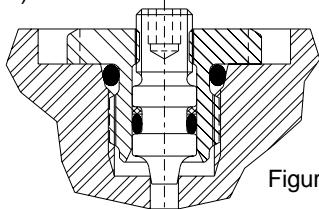

Figure A

(2) When a cushion is specified at the cap end:

- a. A cushion stepped spear is provided on the piston rod.

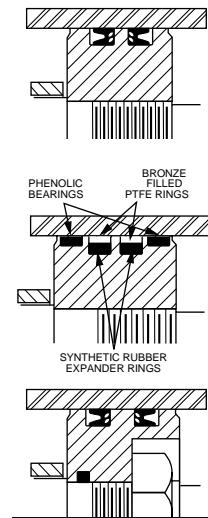

## The exclusive "Jewel" gland gives you longer cylinder life, better performance and lower costs.

An extra-long inboard bearing surface insures lubrication from within the cylinder. Outboard of the bearing surface are two leakproof seals – The TS-2000 and Wiperseal. The serrated TS-2000 (primary seal) is completely self-compensating and self-relieving. It adjusts to mechanical deflections or any pressure variation from near-zero to rated operating pressure. The result is positive, no-leak sealing – regardless of conditions.

The Wiperseal does double duty. On the advance stroke, it acts as a secondary pressure seal. On the return, it wipes away any dirt on the rod. This means less wear on bearing surfaces and internal parts. Longer life for working parts. And, less loss of fluid. Plus, you can replace a "Jewel" gland without removing the tie rods or the retainer. Just a few twists with a spanner wrench does the job.

#### Optional Pistons

**Lipseal® Piston** – Optional at no extra charge. Zero leakage under static conditions for hydraulic pressures up to 3000 psi. Seals are self-compensating to conform to variations in pressure, mechanical deflection, and wear. Back-up washers prevent extrusion.

**Hi Load Piston** – Optional at extra charge. Includes wear rings and bronze-filled PTFE seals. Two wear rings serve as bearings which deform radially under side-loading, enabling the load to be spread over a larger area and reduce unit loading. Bronze-filled PTFE seals are designed for extrusion-free, leak-proof service and longer cylinder life than the lipseal type piston.

**Nut Retained Piston** – Optional at extra charge.

- b. A "float check" self-centering bushing is provided which incorporates a large flow check valve for fast "out-stroke" action.
- c. A socket-keyed needle valve is provided that is flush with the side of the cap when wide open. It is located on side number 2 in all mounting styles except D, DB, DD, JJ, HH and E. In these styles it is located on side number 3.

#### Cushion Length

Cyl. Bore In.	Rod Dia. In.	Rod No.	Cushion Length – Inch	
			Head*	Cap

8	3 $\frac{1}{2}$	1	21/16	2
	5 $\frac{1}{2}$	2	115/16	2

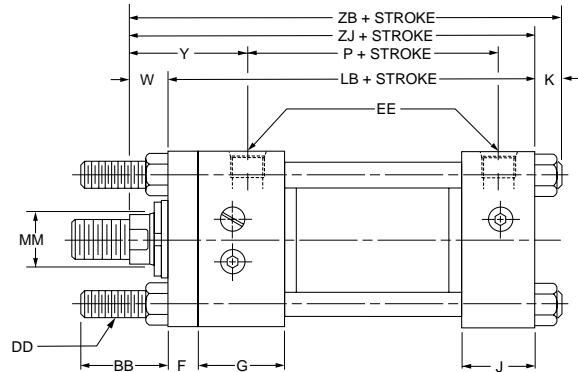

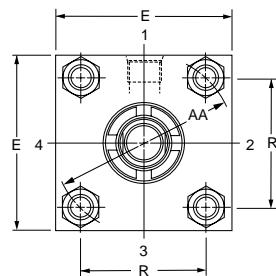

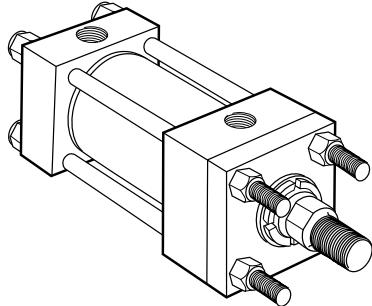

\*Head end cushions for rod diameters not listed have cushion lengths with the limits shown.

For Cylinder Division Plant Locations – See Page II.

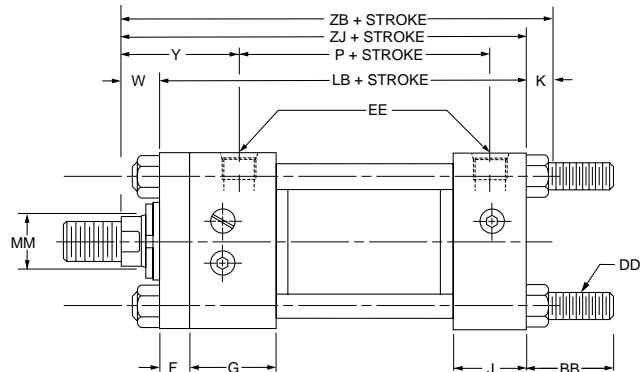

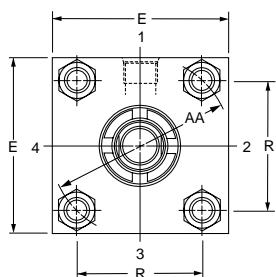

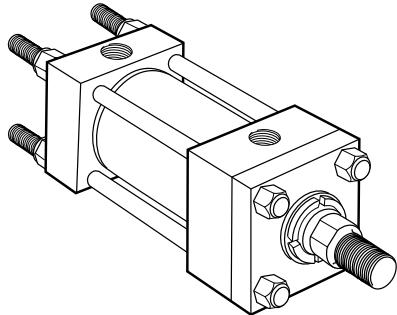

Tie Rod Mountings  
1½" to 6" Bore Sizes

# Series 2H Heavy Duty Hydraulic Cylinders

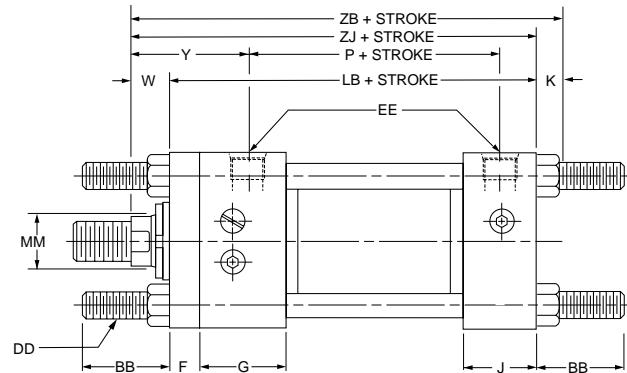

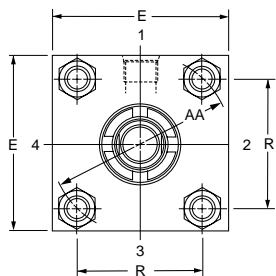

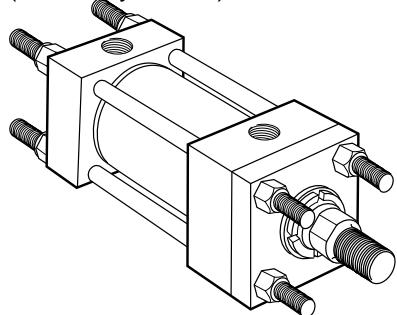

Tie Rods Extended Head End  
Style TB  
(NFPA Style MX3)

Tie Rods Extended Cap End  
Style TC  
(NFPA Style MX2)

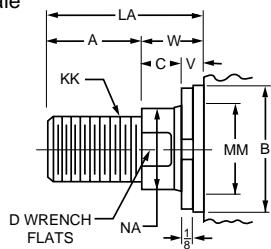

Tie Rods Extended Both Ends  
Style TD  
(NFPA Style MX1)

Basic Mounting (T) — NFPA MXO — Not shown is no tie rod extended and can be supplied upon request.

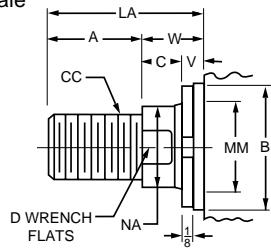

Rod End Dimensions — see table 2

Thread Style 4  
(NFPA Style SM)  
Small Male

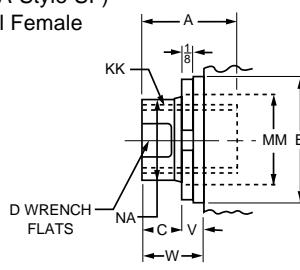

A high strength rod end stud is supplied on thread style 4 through 2" diameter rods and on thread style 8 through 1½" diameter rods. Larger sizes or special rod ends are cut threads. Style 4 rod ends are recommended where the workpiece is secured against the rod shoulder.

Thread Style 8  
(NFPA Style IM)  
Intermediate Male

When the workpiece is not shouldered, style 4 rod ends are recommended through 2" piston rod diameters and style 8 rod ends are recommended on larger diameters. Use style 9 for applications where female rod end threads are required. If rod end is not specified, style 4 will be supplied.

Thread Style 9  
(NFPA Style SF)  
Small Female

**"Special" Thread Style 3**

Special thread, extension, rod eye, blank, etc., are also available.

To order, specify "Style 3" and give desired dimensions for CC or KK, A and LA. If otherwise special, furnish dimensioned sketch.

Cap Square Flange Mounting  
Style HB  
(NFPA Style MF6)

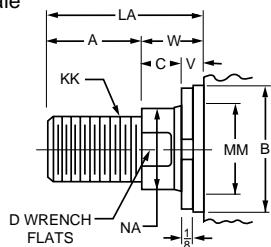

Cap Rectangular Mounting  
Style HH  
(NFPA Style ME6)

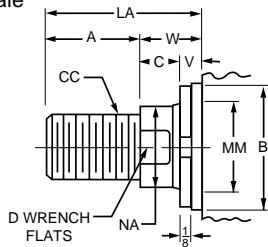

Rod End Dimensions — see table 2

Thread Style 4  
(NFPA Style SM)  
Small Male

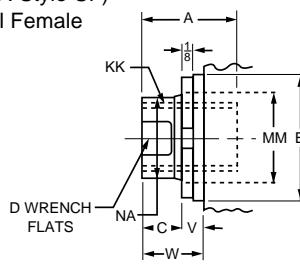

A high strength rod end stud is supplied on thread style 4 through 2" diameter rods and on thread style 8 through 1½" diameter rods. Larger sizes or special rod ends are cut threads. Style 4 rod ends are recommended where the workpiece is secured against the rod shoulder.

Thread Style 8  
(NFPA Style IM)  
Intermediate Male

When the workpiece is not shouldered, style 4 rod ends are recommended through 2" piston rod diameters and style 8 rod ends are recommended on larger diameters. Use style 9 for applications where female rod end threads are required. If rod end is not specified, style 4 will be supplied.

Thread Style 9  
(NFPA Style SF)  
Small Female

"Special" Thread Style 3

Special thread, extension, rod eye, blank, etc., are also available.

To order, specify "Style 3" and give desired dimensions for CC or KK, A and LA. If otherwise special, furnish dimensioned sketch.

For additional information — call your local Parker Cylinder Distributor.

For Cylinder Division Plant Locations – See Page II.

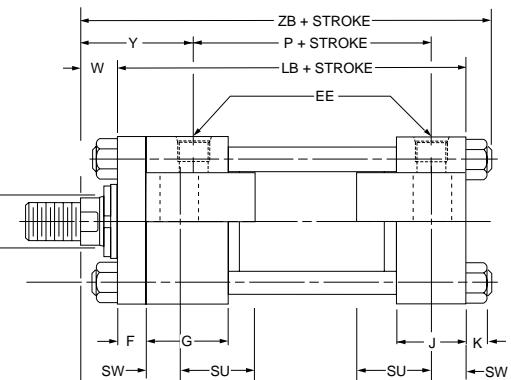

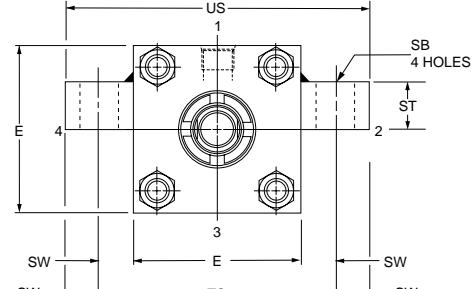

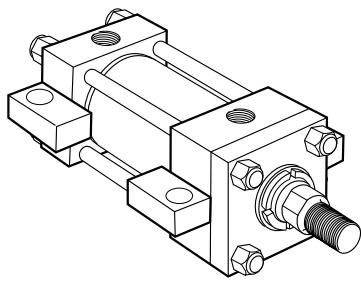

Side Lugs, Centerline Lugs  
and Side Tapped Mountings  
1½" to 6" Bore Sizes

## Series 2H Heavy Duty Hydraulic Cylinders

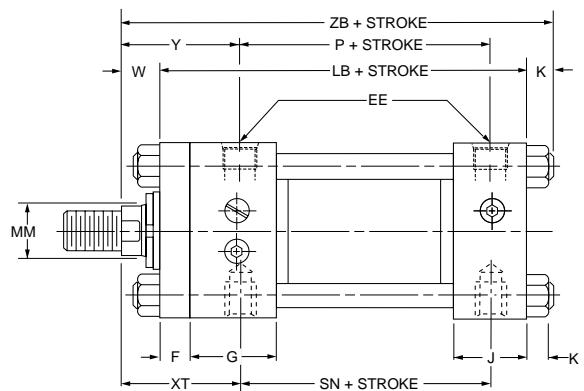

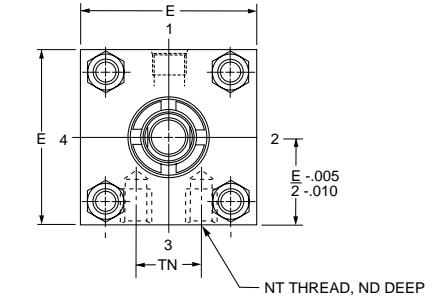

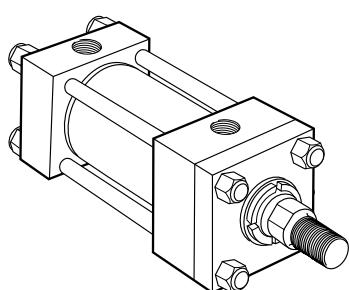

Side Lug Mountings  
Style C  
(NFPA Style MS2)

Centerline Lugs Mounting  
Style E  
(NFPA Style MS3)

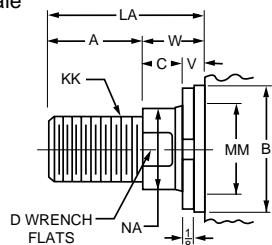

Side Tapped Mounting  
Style F  
(NFPA Style MS4)

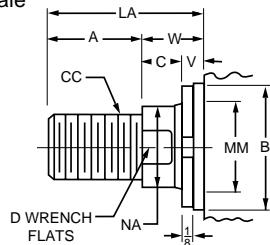

Rod End Dimensions — see table 2

Thread Style 4  
(NFPA Style SM)  
Small Male

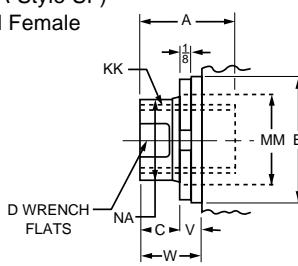

A high strength rod end stud is supplied on thread style 4 through 2" diameter rods and on thread style 8 through 1½" diameter rods. Larger sizes or special rod ends are cut threads. Style 4 rod ends are recommended where the workpiece is secured against the rod shoulder.

Thread Style 8  
(NFPA Style IM)  
Intermediate Male

When the workpiece is not shouldered, style 4 rod ends are recommended through 2" piston rod diameters and style 8 rod ends are recommended on larger diameters. Use style 9 for applications where female rod end threads are required. If rod end is not specified, style 4 will be supplied.

Thread Style 9  
(NFPA Style SF)  
Small Female

**"Special" Thread Style 3**

Special thread, extension, rod eye, blank, etc., are also available.

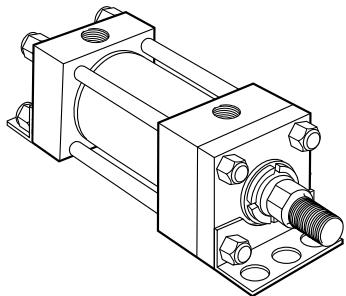

To order, specify "Style 3" and give desired dimensions for CC or KK, A and LA. If otherwise special, furnish dimensioned sketch.

For additional information – call your local Parker Cylinder Distributor.

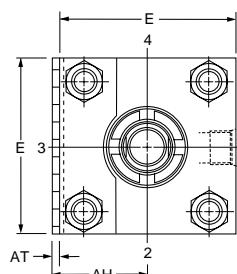

Side End Angles, Side End Lugs  
and Cap Fixed Clevis Mountings  
1½" to 6" Bore Sizes

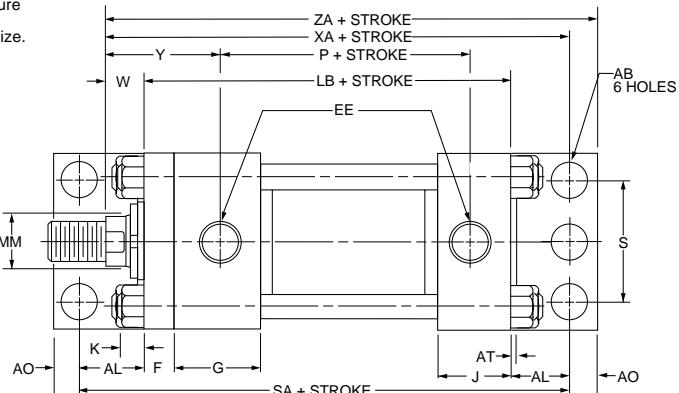

Side End Angles Mounting  
Style CB  
(NFPA Style MS1)

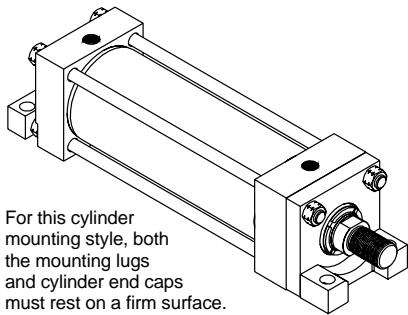

The maximum recommended operating pressure for Style CB is 500 psi. The recommended minimum stroke length is two times the bore size.

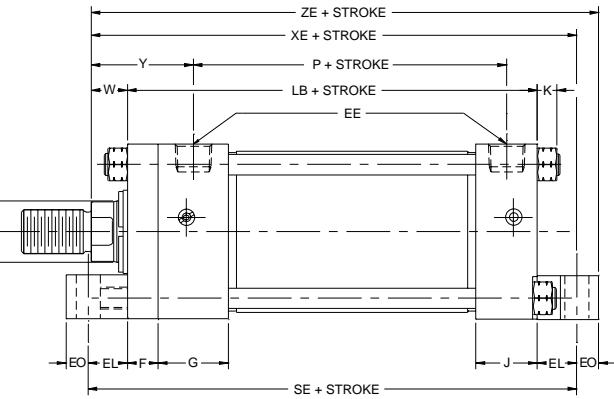

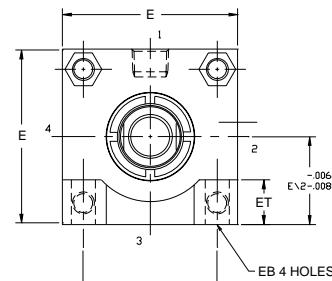

## Series 2H Heavy Duty Hydraulic Cylinders

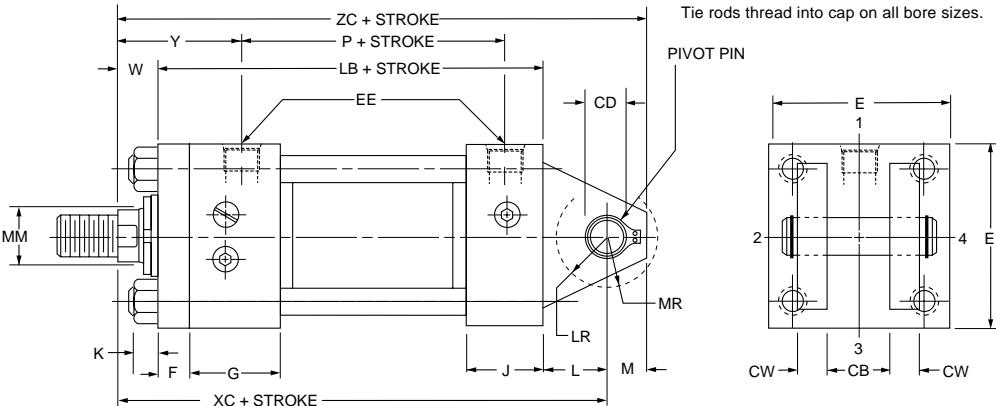

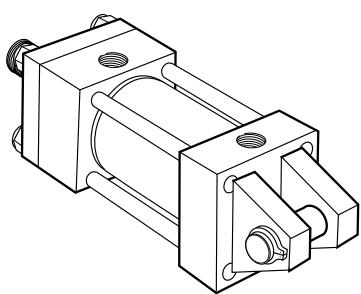

Side End Lugs Mounting  
Style G  
(NFPA Style MS7)

For this cylinder mounting style, both the mounting lugs and cylinder end caps must rest on a firm surface.

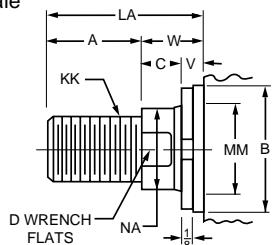

Cap Fixed Clevis Mounting  
Style BB  
(NFPA Style MP1)

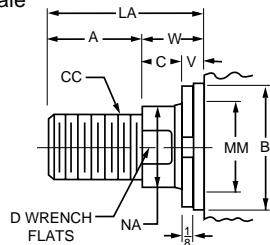

Rod End Dimensions — see table 2

Thread Style 4  
(NFPA Style SM)  
Small Male

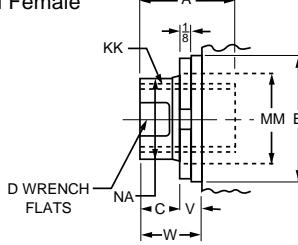

A high strength rod end stud is supplied on thread style 4 through 2" diameter rods and on thread style 8 through 1½" diameter rods. Larger sizes or special rod ends are cut threads. Style 4 rod ends are recommended where the workpiece is secured against the rod shoulder.

Thread Style 8  
(NFPA Style IM)  
Intermediate Male

When the workpiece is not shouldered, style 4 rod ends are recommended through 2" piston rod diameters and style 8 rod ends are recommended on larger diameters. Use style 9 for applications where female rod end threads are required. If rod end is not specified, style 4 will be supplied.

Thread Style 9  
(NFPA Style SF)  
Small Female

### "Special" Thread Style 3

Special thread, extension, rod eye, blank, etc., are also available.

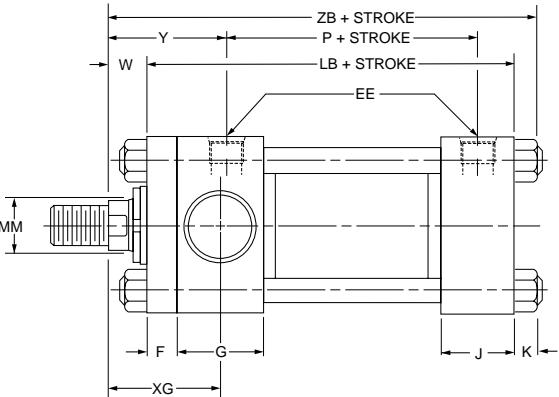

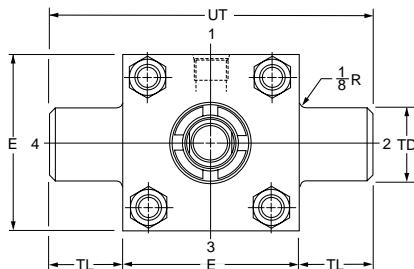

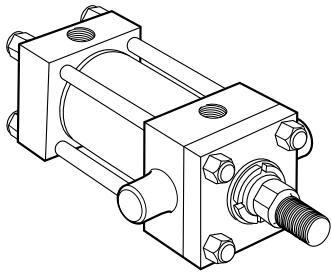

To order, specify "Style 3" and give desired dimensions for CC or KK, A and LA. If otherwise special, furnish dimensioned sketch.

For additional information – call your local Parker Cylinder Distributor.

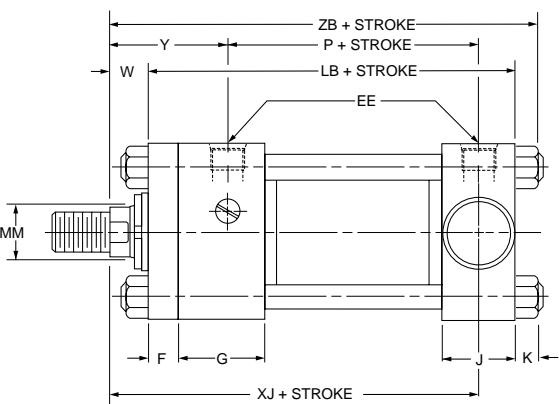

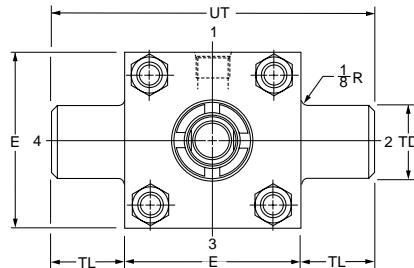

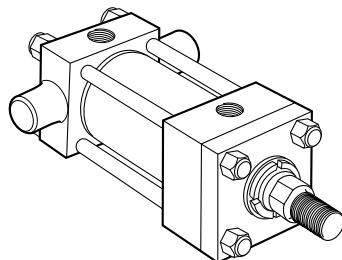

Trunnion Mountings  
1½" to 6" Bore Sizes

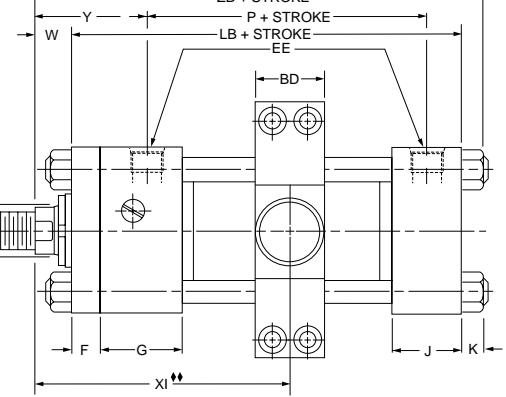

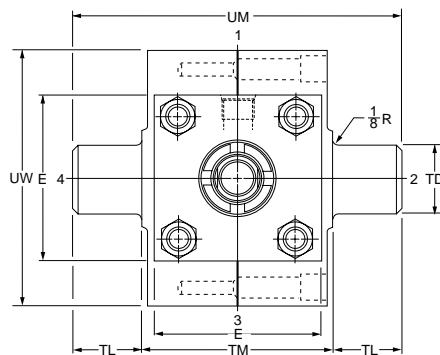

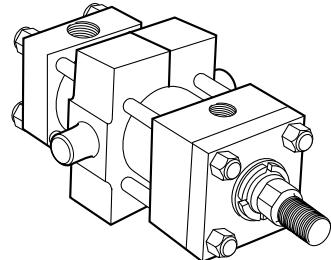

Head Trunnion Mounting  
Style D  
(NFPA Style MT1)

Cap Trunnion Mounting  
Style DB  
(NFPA Style MT2)

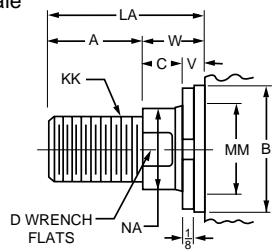

Intermediate Fixed Trunnion Mounting  
Style DD  
(NFPA Style MT4)

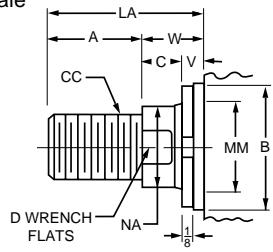

Rod End Dimensions — see table 2

Thread Style 4  
(NFPA Style SM)  
Small Male

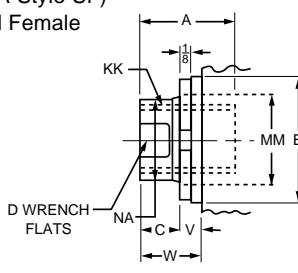

A high strength rod end stud is supplied on thread style 4 through 2" diameter rods and on thread style 8 through 1½" diameter rods. Larger sizes or special rod ends are cut threads. Style 4 rod ends are recommended where the workpiece is secured against the rod shoulder.

Thread Style 8  
(NFPA Style IM)  
Intermediate Male

When the workpiece is not shouldered, style 4 rod ends are recommended through 2" piston rod diameters and style 8 rod ends are recommended on larger diameters. Use style 9 for applications where female rod end threads are required. If rod end is not specified, style 4 will be supplied.

Thread Style 9  
(NFPA Style SF)  
Small Female

**"Special" Thread Style 3**

Special thread, extension, rod eye, blank, etc., are also available.

To order, specify "Style 3" and give desired dimensions for CC or KK, A and LA. If otherwise special, furnish dimensioned sketch.

For additional information – call your local Parker Cylinder Distributor.

	3	3	—	17/8-12	3	11/4	121/8	147/8	145/8	4	4	2.0000						
	4	31/2	—	17/8-12	3	11/4	121/8	147/8	145/8	4	4							

†Maximum operating pressure at 4:1 design factor is based on tensile strength of material. Pressure ratings are based on standard commercial bearing ratings.

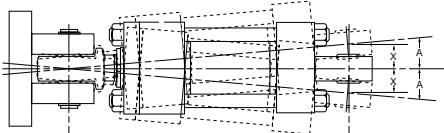

Note: for additional dimensions see Series 2H Style BB mount.

Rod No. 1 is standard.

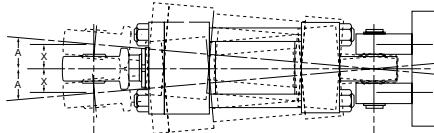

\*Dimension "CD" is hole diameter.

## Mounting Information

### Head End Mounting

### Cap End Mounting

Recommended maximum swivel angle on each side of the cylinder centerline.

Table 1

Bore	Head End Mounted		Cap End Mounted	
	Angle a	Tan. of a	Angle a	Tan. of a
1½	2½	.035	2½	.035
2	2½½	.044	4½½	.079
2½	2½½	.044	4½½	.079
3¼	3½	.052	3½	.052
4	2½½	.044	3½	.052
5	3½	.052	3½	.052
6	3½	.052	3½	.052

Note: Dimension X is the maximum off center mounting of the cylinder. To determine dimension X for various stroke lengths multiply the distance between pivot pin holes by tangent of angle a. For extended position use  $X = XL \times 2X$  stroke.

For additional information – call your local Parker Cylinder Distributor.

\*If only one end of these Double Rod Cylinders is to be cushioned, be sure to specify clearly which end this will be.

To determine dimensions for a double rod cylinder, first refer to the desired single rod mounting style cylinder shown on preceding pages of this catalog. (See table at left.) After selecting necessary dimensions from that drawing, return to this page supplement the single rod dimensions with those shown on drawing at right and dimension table below. Note that double rod cylinders have a head (Dim. G) at both ends and that dimension LD replaces LB and ZL replaces ZB, etc. The double rod dimensions differ from, or

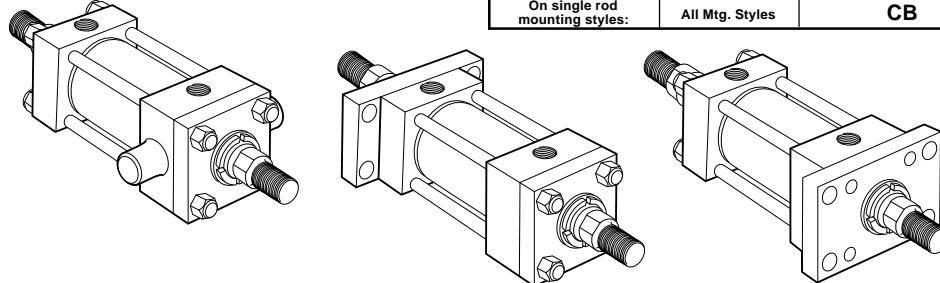

are in addition to those for single rod cylinders shown on preceding pages and provide the information needed to completely dimension a double rod cylinder.

On a double rod cylinder where the two rod ends are different, be sure to clearly state which rod end is to be assembled at which end. Port position 1 is standard. If other than standard, specify pos. 2, 3 or 4 when viewed from one end only. See port position information in Section C.

All dimensions are in inches and apply to Code 1 rod sizes only. For alternate rod sizes, determine all envelope dimensions (within LD dim.) as described above and then use appropriate rod end dimensions for proper rod size from single rod cylinder.

## Cylinder Accessories

### Cylinder Accessories

Parker offers a complete range of cylinder accessories to assure you of greatest versatility in present or future cylinder applications.

### Rod End Accessories

Accessories offered for the rod end of the cylinder include Rod Clevis, Eye Bracket, Knuckle, Clevis Bracket and Pivot Pin. To select the proper part number for any desired accessory, refer to Chart A below and look opposite the thread size of the rod end as indicated in the first column. The Pivot Pins, Eye Brackets and Clevis Brackets are listed opposite the thread size which their mating Knuckles or Clevises fit.

### Chart A

4-12	50954	73539	73547	73438	73543	82181	

For alignment coupler dimensions, see section C.

\*Cylinder accessory dimensions conform to NFPA recommended standard NFPA/T3.6.8 R1-1984, NFPA recommended standard fluid power systems — cylinder — dimensions for accessories for catalogued square head industrial types. Parker adopted this standard in April, 1985. Eye Brackets or Mounting Plates shipped before this date may have different dimensions and will not necessarily interchange with the NFPA standard. For dimensional information on older style Eye Brackets or Mounting Plates consult Drawing #144805 or previous issues of this catalog.

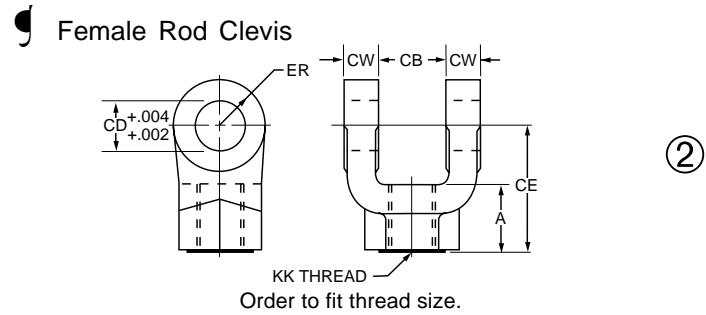

### Accessory Load Capacity

The various accessories on this and the following pages have been load rated for your convenience. The load capacity in lbs., shown on the following page is the recommended maximum load for that accessory based on a 4:1 design factor in tension. (Pivot Pin is rated in shear.) Before specifying, compare the actual load or the tension (pull) force at maximum operating pressure of the cylinder with the load capacity of the accessory you plan to use. If load or pull force of cylinder exceeds load capacity of accessory, consult factory.

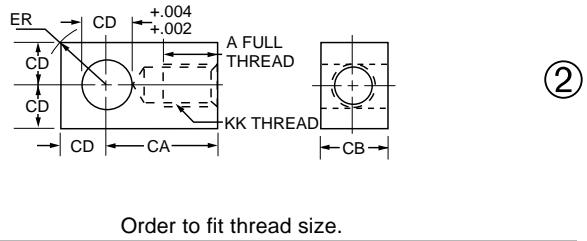

### Mounting Plates

Mounting Plates for Style BB (clevis mounted) cylinders are offered. To select proper part number for your application, refer to Chart B, above right.

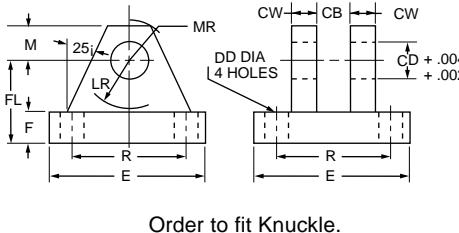

# Series 2H Heavy Duty Hydraulic Cylinders

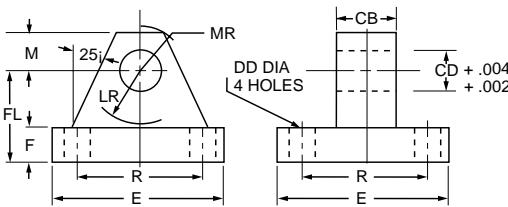

### ① Knuckle (Female Rod Eye)

### Clevis Bracket for Knuckle

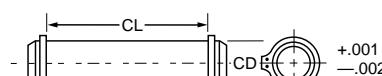

### ② Mounting Plate or Eye Bracket

- When used to mate with the Rod Clevis, select from Chart A.
- When used to mount the Style BB cylinders, select from the Mounting Plate Selection Table. See Chart B at lower left.

### ⑧ Pivot Pin

- Pivot Pins are furnished with Clevis Mounted Cylinders as standard.
- Pivot Pins are furnished with (2) Retainer Rings.
- Pivot Pins must be ordered as separate item if to be used with Knuckles, Rod Clevises, or Clevis Brackets.

For additional information – call your local Parker Cylinder Distributor.

# Series 2H

## Heavy Duty Hydraulic Cylinders

### How to Order Series "2H" Cylinders

#### Data Required on All Cylinder Orders

When ordering Series "2H" cylinders, be sure to specify each of the following requirements:

**Note:** Duplicate cylinders can be ordered by giving the SERIAL NUMBER from the nameplate of the original cylinder. Factory records supply a quick, positive identification.

**a) Bore**

**b) Mounting Style**

Specify your choice of mounting style — as shown and dimensions in this catalog. If double rod is wanted, specify "with double rod".

**c) Series Designation ("2H")**

**d) Length of Stroke**

**e) Piston Rod Diameter**

Call out rod diameter or rod code number. In Series "2H" cylinders, standard rod diameters (Code No. 1) will be furnished if not otherwise specified, unless length of stroke makes the application questionable.

**f) Piston Rod End Thread Style**

Call out thread style number or specify dimensions. Thread style number 4 will be furnished if not otherwise specified.

Additional data is required on orders for cylinders with special modifications. For further information, consult factory.

**g) Cushions (If required)**

Specify "Cushion-head end", "Cushion-cap end" or "Cushion both ends" as required. If cylinder is to have a double rod and only one cushion is required, be sure to specify clearly which end of the cylinder is to be cushioned.

**h) Alternate Lipseal® or Hi Load Piston (If desired)**

Parker Lipseal® pistons are offered as an option at no extra cost in the Series "2H" cylinders. With this feature, zero leakage under static holding conditions is attained. Call out "with Lipseal® piston" if this type of piston is desired. If not specified, the ring type piston will be furnished.

**i) Ports**

Parker recommends SAE Straight Thread Ports for leak-proof port connections on Series "2H" hydraulic cylinders.

**j) Fluid Medium**

Series "2H" hydraulic cylinders are equipped with seals for use with hydraulic oil. If other than hydraulic oil will be used, specify class of fluid (see Catalog section C).

#### Class 1 Seals

Class 1 seals are the seals provided as standard in a cylinder assembly unless otherwise specified. For further information on fluid compatibility on operating limitations of all compounds, see section C.

For the 2H series cylinders the following make-up Class 1 Seals:

Primary Piston Rod Seal – Enhanced Polyurethane

Piston Rod Wiper – Nitrile

Piston Seals – Cast Iron Rings

Option – Nitrile lipseals with polymyte back-up washers

Option – Hi Load. Filled P.T.F.E. seals with a nitrile expander.

O-Rings – Nitrile (nitrile back-up washer when used)

#### Service Policy

On cylinders returned to the factory for repairs, it is standard policy for the Cylinder Division to make such part replacements as will put the cylinder in as good as new condition. Should the condition of the returned cylinder be such that expenses for repair would exceed the costs of a new one, you will be notified.

Address all correspondence and make shipments to, Service Department at your nearest regional plant listed in the pages of this catalog.

#### Warranty

Seller warrants the goods sold hereunder to be free from defects in material and workmanship. This warranty shall terminate eighteen months after date of shipment from Seller's plant and claims not made in writing within such period are waived.

The above warranty does not extend to goods damaged after date of shipment from Seller's plant where the damage is not directly due to a defect in material or workmanship, nor does it apply to goods altered or repaired by anyone other than Seller's authorized employees, nor to goods furnished by Buyer or acquired at Buyer's request and/or to Buyer's specifications.

If the goods are in accordance with or in reference to an engineering drawing specified by or furnished to the customer, the specifications and information on the drawing shall be applicable in determining such correct use, operation and application.

#### Certified Dimensions

Parker Cylinder Division guarantees that all cylinders ordered from this catalog will be built to dimensions shown. All dimensions are certified to be correct, and thus it is not necessary to request certified drawings.

When claiming a breach of warranty, Buyer must notify Seller promptly whereupon Seller will either examine the goods at their site, or issue shipping instructions for return to Seller (transportation costs prepaid by Buyer). When any goods sold hereunder are proved as not warranted, Seller's sole obligation under this warranty shall be to repair or replace the goods, at its option, without charge to Buyer.

**The above warranty comprises Seller's sole and entire warranty obligation and liability to Buyer, its customers and assigns in connection with goods sold hereunder. All other warranties, express or implied, including but not limited to, warranties of merchantability and fitness, are expressly excluded.**

For additional information – call your local Parker Cylinder Distributor.

# Series 2H

## Heavy Duty Hydraulic Cylinders

Model Numbers

### Series "2H" Model Numbers – How to Develop Them – How to "Decode" Them

Parker Series 2H cylinders can be completely and accurately described by a model number consisting of coded symbols. For single rod cylinders a maximum of 17 places for digits and letters are used in a prescribed sequence to produce a model number. Only nine places are needed to completely describe a standard noncushioned Series 2H

cylinder. To develop a model number, select only those symbols that represent the cylinder required, and place them in the sequence indicated below.

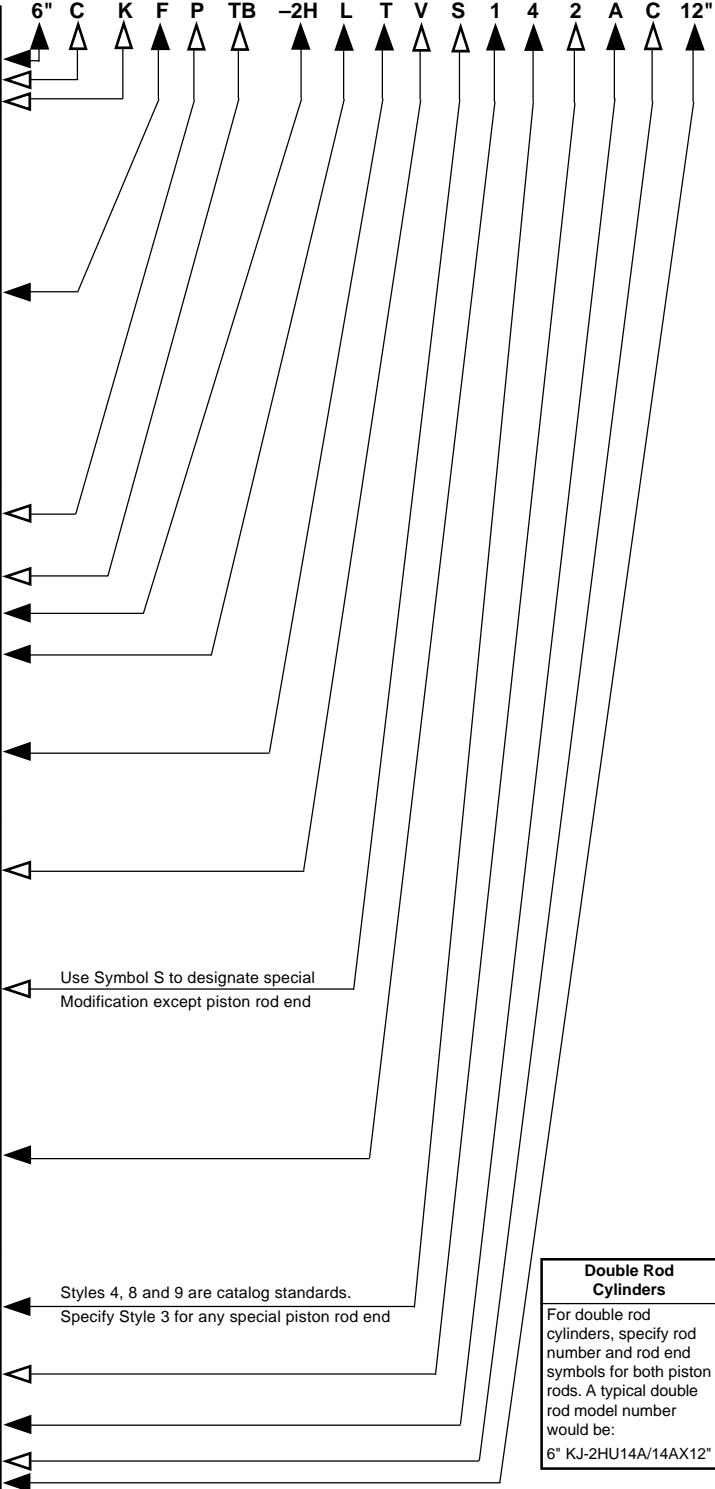

**Note:** Page numbers with a letter prefix, ie: C77, are located in section C of this catalog.

Feature	Description	Page No.	Symbol
Bore*	Specify in inches

\*Required for Basic Cylinder Model Number

Dark Arrows Indicate Basic Minimum Model Number

†Cylinders with these mounting styles should have a minimum stroke length equal to or greater than their bore size.

For Cylinder Division Plant Locations – See Page II.

# Parker TS-2000 seal designed to eliminate cylinder rod seal leakage.

Parker Series 2H Heavy Duty and Series 3L Medium Duty Hydraulic Cylinders with the TS-2000 seal offers positive protection against cylinder rod leakage under the most demanding applications.

The TS-2000 seal is the product of countless hours of research, development and extensive field testing and is only available on Parker Cylinders.

Based on the popular Parker Serrated Lipseal rod design, the TS-2000 incorporates the pressure-compensated, uni-directional characteristics of a U-cup with the multiple edge sealing effectiveness of compression-type stacked-packings.

The goal for the Parker team was to design a rod seal suitable for all types of applications, regardless of pressure profile. It had to be composed of a

"Jewel" gland with wiperseal and TS-2000 cylinder rod seal.

material that would not react chemically with hydraulic fluids. And it had to produce better and more reliable "dry rod" performance than the standard serrated lip-seal design in a broad range of applications.

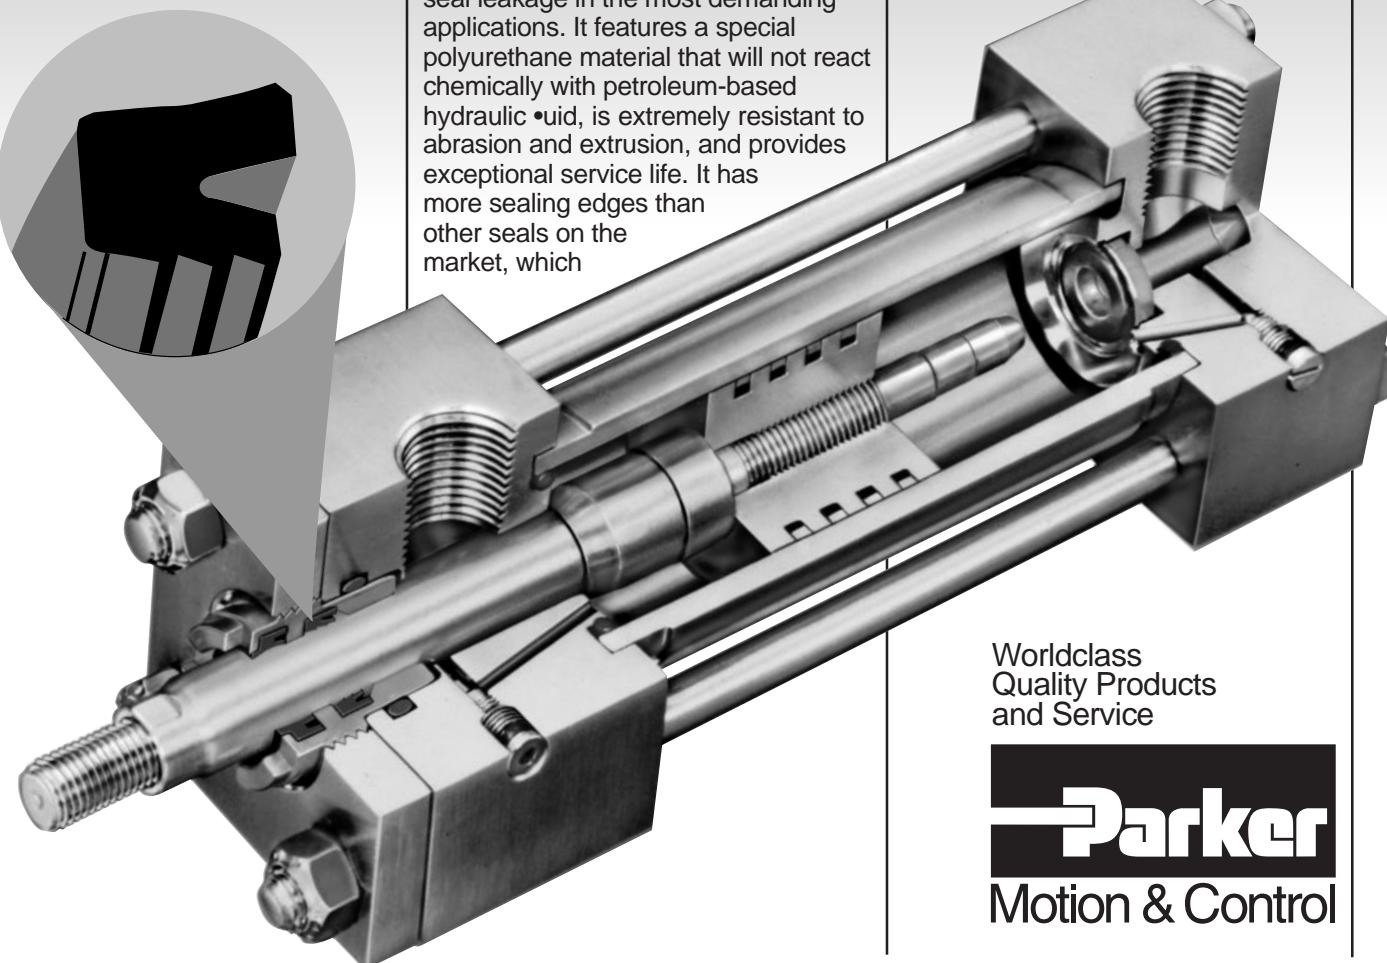

The result is the TS-2000 seal, designed especially to eliminate rod seal leakage in the most demanding applications. It features a special polyurethane material that will not react chemically with petroleum-based hydraulic fluid, is extremely resistant to abrasion and extrusion, and provides exceptional service life. It has more sealing edges than other seals on the market, which

in turn produces "dry rod" performance. The seal geometry was refined for maximum stability in the groove and has excellent performance characteristics throughout a broad range of pressures and piston rod velocities.

The Parker design team was successful!

TS-2000 rod seal has not failed in any of the test applications in the lab or on the job, no matter how tough or demanding.

For more information on the TS-2000 call or write your local Parker distributor or Parker Hannifin Corporation, Cylinder Division, 500 S. Wolf Road, Des Plaines, IL 60016, 847-298-2400.

For additional information – call your local Parker Fluidpower Motion & Control Distributor.
